

Fast and secure

## Internet connections

**Talk Straight provides a variety of internet connection types that fully support the most demanding of commercial use. From secure, dedicated, fibre Leased Lines, FTTP and G.Fast, to business grade, superfast and standard broadband connections, we can provide a 99.99% service level guarantee, giving you peace of mind and continuity of service.**

Our wholesale relationships with all the leading providers allow us to access the latest technologies and negotiate the best possible speeds at the best possible price for your location.

Most importantly, we will spend time understanding the demands your business will make on your internet connection, and advise you of the correct connection speed for your organisation.

### Secure connections

Recently confirmed by ISPA as the UK's Best Security ISP, Talk Straight can provide on-site and hosted security via our partners Fortinet, who are the global leaders in Next Generation Firewalls and Unified Threat Management.

Every Talk Straight connection can be securely routed through our Fortinet virtualised firewalls, providing you with the world's best network protection, so reducing your risk of a potentially devastating cyber attack.

**Please see our Security product sheet for further details.  
All Talk Straight internet connections can support hosted phone services.**

# Connection Types

## FTTP "Ultrafast Broadband"

Ultrafast (FTTP and G.Fast) is the next generation in Broadband Technologies. Ideal for budget-conscious companies requiring high-speed, high-quality broadband to meet the demands of everyday business. FTTP or Fibre To The Premises, delivers speeds in increments up to 1000Mbps (1Gbps) providing the fastest available broadband at the lowest ever available price.

## Dedicated Leased Line "Private Fibre Line"

For larger businesses, or for those who are 100% reliant on the internet and who use the hungriest of bandwidth applications such as 4K media and video conferencing. (Symmetrical speeds up to 10Gbps).

## EoFTTC "Business Grade Broadband"

For businesses looking for the benefit of Leased Line features, but with the cost benefits of FTTC, EoFTTC is an affordable and robust connection technology. (Up to 80Mbps download speeds with a maximum 20Mbps guaranteed).

## FTTC "Superfast Broadband"

For businesses who need to increase the speed of their broadband, switch to online data storage and enjoy cloud based information sharing wherever you are. (Max speed, 80Mbps download and 20Mbps upload).

## EFM "Ethernet First Mile"

Where high speed broadband or FTTC is not available, 2 or 4 pair EFM circuits can give connectivity up to 20Mbps symmetrical service.

## Managed Wide Area Networks

For businesses looking to manage their networks, servers and devices, across multiple locations from one central point.

This Virtual Private LAN Services is an innovative technology that allows different geographical locations to privately connect multiple sites together, on the same Local Area Network (LAN), regardless of location. Please see our Multi Connect product Sheet for more details.

- 100% secure private network
- Simplified network management makes it easy to add and change sites
- Reduced administration and equipment costs
- Reduced network complexity means lower latency and improved performance between sites
- Fully supported product with true end-to-end quality of service, intelligent distribution of bandwidth and six classes of service
- Monitor and adjust allocation of bandwidth usage during peak times with real-time Management Reports
