SIP Trunks

Telephony Transformed

By 2025, ISDN lines will be switched off, and by 2020 vendors will stop accepting ISDN orders. Organisations will need to move to SIP Trunks.

This is good news for businesses as SIP Trunks replace the need for traditional physical ISDN lines. Instead, SIP “phone lines,” or channels, run over a protected segment of Talk Straight internet, saving businesses huge sums of money.

With SIP Trunks your telephone line rental costs will be on average 70% lower than traditional telephone line rental costs; your call costs will be lower, your phone system will flex with ease and your call quality will be guaranteed.

All Phone features work as standard with SIP Trunks and are all included free of charge as part of your package. What’s more, by consolidating your voice and data services, you will receive one standard bill for everything giving you full control of your communications costs. Call bundle options are also available for free local, national and UK mobile calls.

If you need to save money on your phone bills, or you’re looking to replace an outdated or outgrown phone system, a switch to SIP Trunks is definitely the answer.

Talk Straight provides a variety of internet connections suitable for supporting SIP Trunks and other VoIP phone services.

SIP Trunk Benefits

Free site-to-site calls

However many sites you have, and wherever your sites are, all phone calls between them are free of charge.

Highly scalable

The virtual nature of SIP Trunks means it's easy to scale the network to match demand. If you require more "phone lines" we simply activate more channels.

Guaranteed call quality and security

Increased bandwidth capabilities mean SIP phone calls are of a quality comparable to traditional phone calls and come with a call quality guarantee. Our SIP Trunks have a direct interconnect to our carrier, meaning traffic doesn't go over the internet. This guarantees the security of your traffic and the quality of your calls.

Quick and easy to install

Because there are no physical lines, SIP Trunks are quick and easy to install. Simply plug in your compatible PBX phone system, or the VoIP gateway we will provide you with, let us configure your system remotely, and away you go - making savings straight away.

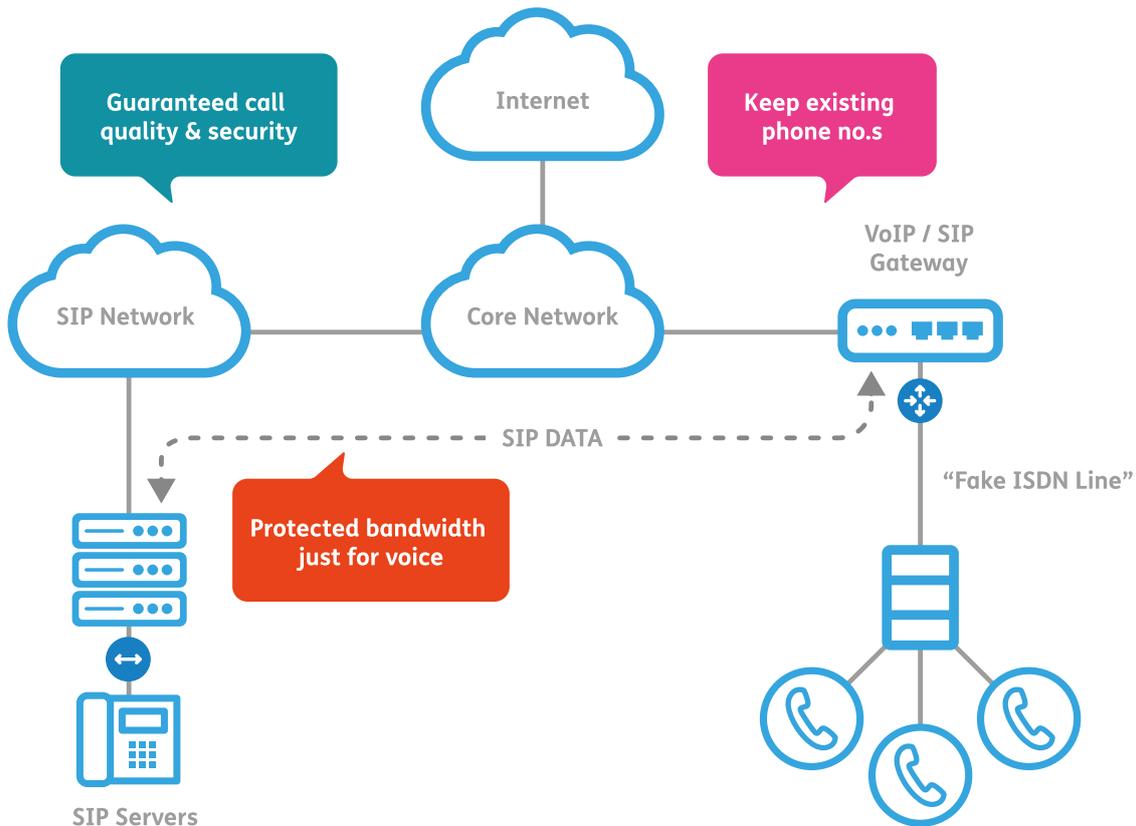

Never miss a call

SIP Trunks let you route any number of calls to mobiles or alternative sites, so calls are never missed.

Disaster recovery perfect

If you're relocating, under-going building work or unfortunate enough to experience building damage or a power outage, just simply redirect your calls to any other number or remote device.
